

Your method, in every class.

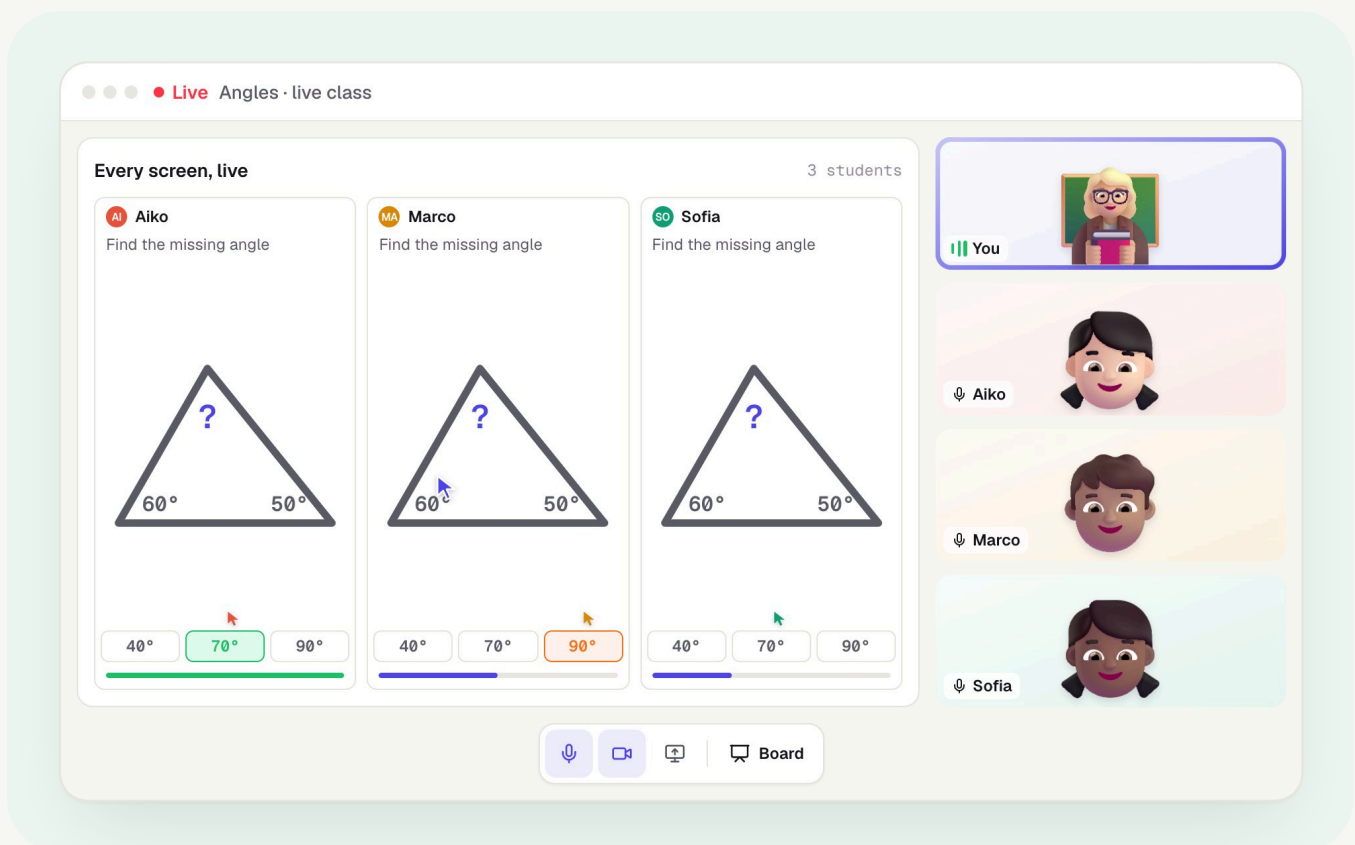

For online schools of any subject. Every teacher builds lessons in your method, sees every student live and gets a report and homework for each one after class.

Many teachers, one standard

Any subject, any age

Video built in

One link, no student accounts

An example class: the teacher sees every student's screen as they work.

Your method in every class

A new teacher teaches your way from week one.

Every student in view

Each teacher sees every answer as it happens.

A report for each student

After every class, ready to show to parents.

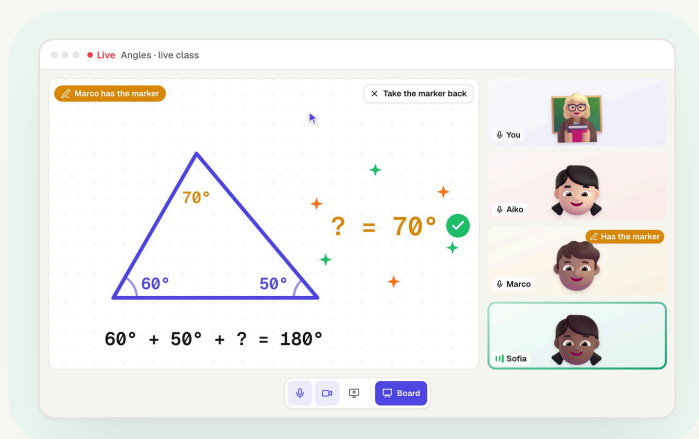

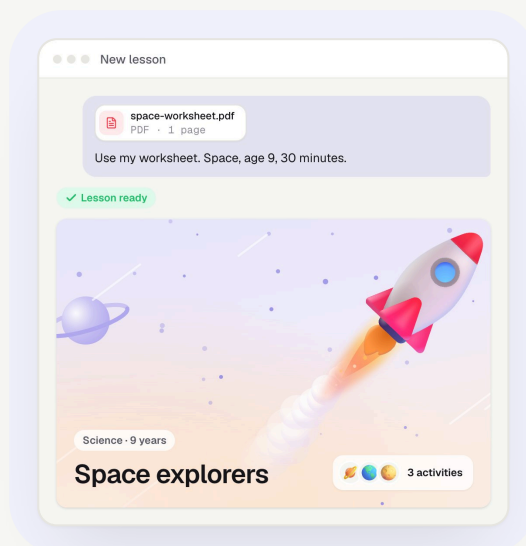

A week with Gomently

Before, during and after every class — the same steps for every teacher in your school.

01 · Before class

A teacher describes the lesson in your school's method, in one message.

Write the topic, the age and how long the class is — or attach the school's own textbook page, worksheet, pictures or recordings. Gomently asks a question or two, shows the plan and builds the activities, pictures and cover. Anything can be changed by asking in the same chat.

02 · In class

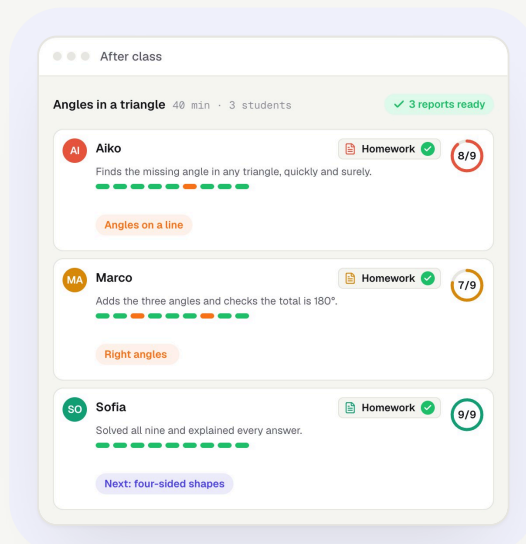

Every student works on their own screen. The teacher sees each one live.

Class meets in a video room in the browser, with a shared board. The teacher hands a student the marker, puts anyone's work on the board and moves the whole class on in one tap.

03 · After class

Each student gets their own report and homework. Every class stays on record.

What went well, what to work on, and homework built from the tasks that student got wrong — ready for the teacher to check and share with parents.

What your school gets

Your method in every class

Teachers build lessons in the school's method and from its material, so a new teacher teaches your way from week one.

Every teacher sees every student

Each student works on their own screen, and the teacher sees every answer as it happens.

A report for each student

After every class, a report per student that you can show to parents, with homework built from it.

Everything in one place

Your method, your material

Attach texts, pictures and recordings. The lesson follows your warm-up and your drills.

Any subject, any age

Maths, chemistry or English for adults: the lesson comes out in the language the teacher writes in.

Tasks students touch

Quizzes, matching, sorting, drawing and games on each student's own screen — more than 1,000 activities.

Take control

A teacher opens one student's task, works on it with them to fix a mistake, then hands it back.

One-to-one or a whole group

The same room runs a private lesson or a full class. Nothing to switch.

A shared board

The whole class draws at once: pen, text, sticky notes, shapes and pictures.

Video in the same room

Camera, microphone and screen share next to the lesson. No second tab, no meeting link.

One link to join

No student accounts, no download. Students type their name and they are in. Only teachers sign in.

Any device, any connection

A laptop, tablet or phone in any modern browser. Students' work stays sharp on a weak connection.

Homework from their mistakes

Short tasks aimed at the gaps each student showed, ready without any preparation.

Progress you can show

Time on each task, right and wrong answers, repeated mistakes and speaking time.

Audio deleted after transcription

The class is transcribed for the report, then the audio is deleted. Only the transcript stays.

Questions schools ask

Does it suit an online school with many teachers?

Yes, whatever the subject. Every teacher builds lessons in the school's method, sees each student live and gets a report for each one after class.

Can we use our own method and material?

Yes. Attach your texts, pictures and recordings, describe your warm-up and drills, and the lesson follows them.

Does it work for groups?

Yes. The same room runs a private lesson or a whole class. One tap moves everyone on, and the teacher can open any student's own screen.

Is the lesson recorded?

It is transcribed so the report can be written, then the audio is deleted. Only the transcript stays, in the teacher's account.

Is video built in?

Yes. Camera, microphone and screen share run in the same room as the lesson. No second tab, no meeting link.

Do students need an account?

No. One link. No account, no download. Students type their name and they are in.

Which subjects and languages?

Any subject, in the language the lesson is described in. The interface is in English, German and Russian.

Will it work on a phone or a weak connection?

Yes. Any modern browser on a laptop, tablet or phone. Gomently sends each student's actions instead of a video of their screen, and video adapts to the bandwidth.

Does it really write the homework?

Yes. After class a report and homework are ready for each student, built from the mistakes that student made.

What do we learn about each student?

Time on each task, right and wrong answers, repeated mistakes and speaking time, collected while the lesson runs.

Bring your method online.

Start with one lesson today, or tell us how your school teaches — subjects, ages, one-to-one or groups, the material your teachers use — and we will reply with how Gomently fits in.
